ETHICAL TECHNOLOGY CONSULTING

Our President/CEO has a PhD in Systematic Theology and has extensive expertise in the ethical use of technology, artificial intelligence (AI), social media, and digital wellbeing. We can provide your organization with a range of consulting services to ensure the ethical use of technologies and emerging technologies to ensure your organization is responsibly using these tools to increase productivity while avoiding the pitfalls these technologies can create.

Artificial Intelligence (AI)

Our organization is on the cutting-edge of artificial intelligence (AI). We can help your academic institution or organization prepare policies concerning the ethical use of AI to ensure your students or employees are responsibly utilizing this emerging technology.

Social Media

Social media is a powerful marketing tool for an organization, but it can also harm digital wellbeing, drawing users into a "time trap". We can guide your organization to the responsible use of social media to ensure it benefits your organization's marketing without diminishing the digital well-being of your employees (or students in academic institutions).

Digital Wellbeing

While technology can supercharge an organization's productivity, it is important to strike an optimal balance concerning the use of technology and digital minimalism. We can guide your organization to prioritizing the principles of deep work and ensuring your employees (or students in academic institutions) are responsibly using technology while preserving their overall digital wellbeing.
